

**PROJECT
FORUM**

The main logo features the word "PROJECT" in a dark teal, sans-serif font above the word "FORUM" in the same font. The letter "O" in "PROJECT" is replaced by a stylized network icon consisting of a central circle connected to four smaller circles. The "O" in "FORUM" is also replaced by a similar network icon, though it is smaller and positioned lower than the one in "PROJECT".

AI in the Room: What Every Project Manager Needs to Know Right Now

James Garner and Yoshi Soornack

The AI Shift: What Construction PMs Need to Know Now

Transforming your role, future-proofing your skills

With you today...

- Head of AI and Data at Gleeds
- Past Chair of PDA Task Force
- Member of RICS Construction Professional Group Panel

that no longer exists”*

Eric Hoffer

REAL TIME DATA DRIVEN DECISIONS

The Iron Law of Projects

Project delivery performance hasn't changed very much in 20 years.

Leveraging digital, data and AI will move the dial.

Output per hour worked, UK, 1997 to 2020, index 1997 = 100 — ONS

September 2008: 2,371,000 workers

March 2019: 2,365,000 workers.

Where will the value gains come from with AI?

Labour productivity improvements are expected to account for over 55% of all GDP gains from AI over the period 2017 - 2030.

As new technologies are gradually adopted and consumers respond to improved products with increased demand, the share of impact from product innovation increases over time.

58% of all GDP gains in 2030 will come from consumption side impacts.

The Pace of Change

AI is the New Electricity

From Light Bulbs to Unimagined Futures

The Past/Present

Early Electricity: Just for lighting.

The Future

Future Potential: Unimagined Transformation.

Just as early electricity users couldn't foresee the internet,
we are only in the 'light bulb phase' of AI.

Nikolai Kondratiev

Russian economist (1892-1938)

Posited long-term economic movements in 1925 in his book, "The major economic cycles" based on historical data on grain and copper prices

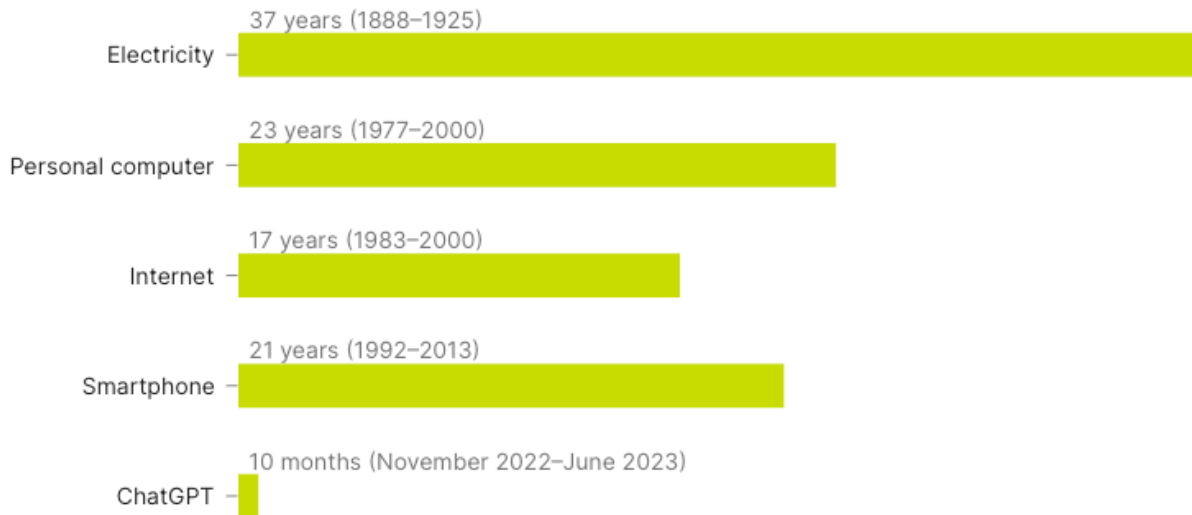

Each wave: 40-60 years

- 1st = steam power (1780-1830)
- 2nd = steel and rail (1830-1880)
- 3rd = electricity and mass production (1880-1930)
- 4th = oil and gas (1930-1970)
- 5th = silicon chip (1970-)

From inception to integration

ChatGPT has reached critical mass adoption faster than other modern innovations

Time until critical mass adoption*

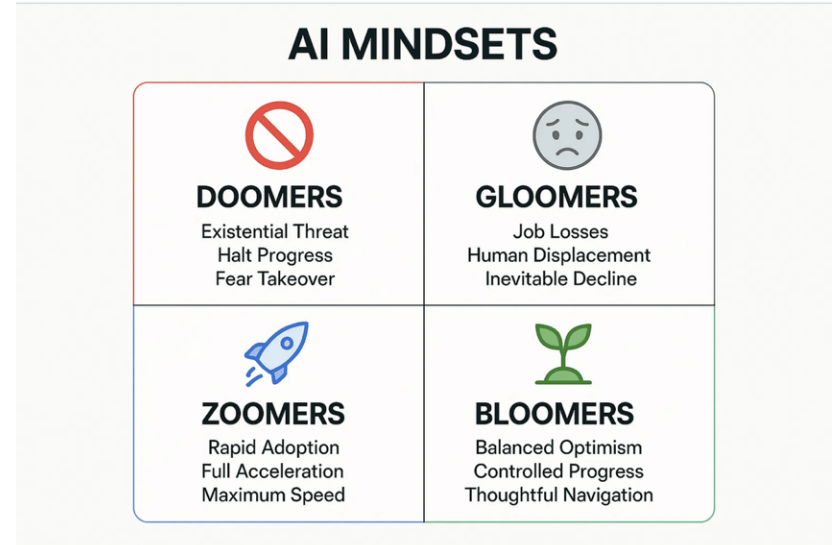

Note: Mass adoption is based on more than 50% adoption in the US, ChatGPT adoption data is from Oliver Wyman Forum Generative AI Survey regarding use of generative AI tools (for example, ChatGPT)

THE FUTURE OF
THE PROFESSIONS

HOW TECHNOLOGY WILL TRANSFORM
THE WORK OF HUMAN EXPERTS

The future of the profession

Focus:

- Impact of AI on professional services.

Two Futures:

- Enhanced professionals with technology.
- Decline of traditional roles, replaced by AI.

Implications:

- Need for adaptation in education, firm structures, and ethics.

Conclusion:

- Embrace technology's central role.

‘How in the future will we solve the problems to which Project Managers (or x) are currently our best answer?’

GenAI – The Opportunity to Improve

- Thinks logically

Vibe Coding

THE COLLINS WORD OF THE YEAR 2025 IS...

vibe coding

'Vibe coding', an emerging software development that turns natural language into computer code using AI, has been named Collins' Word of the Year 2025. The term was popularised by Andrej Karpathy, former Director of AI at Tesla and founding engineer at OpenAI, to describe how AI enables creative output while he could "forget that the code even exists".

NEW JOBS EMERGING FROM AI IN CONSTRUCTION & INFRASTRUCTURE

New Jobs by 2030

Chief AI Officer

Lead AI strategy and implementation across construction operations

Construction AI Data Analyst

Analyze project data to optimize scheduling and resource allocation

BIM & Technology Coordinator

Manage AI-driven BIM tools and digital collaboration systems

Digital Twin Manager

Create virtual replicas of buildings for real-time monitoring

Robotics Technician

Operate and maintain construction robots and automation systems

AI Operations Specialist

Monitor AI systems for safety, predictive analytics, and optimization

Drone Operations Manager

Oversee AI-equipped drones for site surveying and inspections

Data Center Builder

Construct AI infrastructure facilities (439K workers needed)

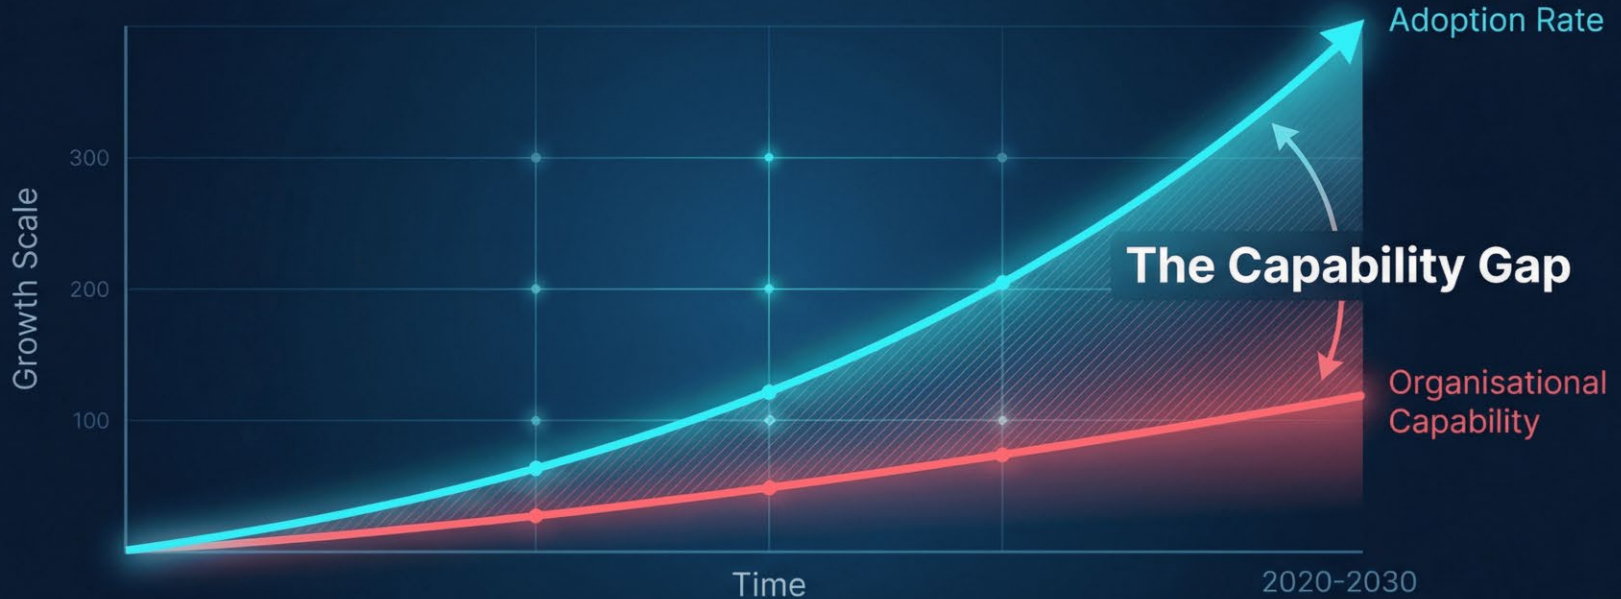

CRITICAL SKILLS SHORTAGE

The construction sector faces a significant skills gap as these new roles emerge. Urgent upskilling and training programs are needed to prepare the workforce for AI-driven opportunities and meet growing infrastructure demands.

The AI Adoption-Capability Gap

A Widening Divide We Must Take Responsibility to Close

Adoption is accelerating, but capability is lagging.
We must bridge this divide.

10 years is a long time in technology

SEEDANCE 2.0

Assist AI

A screenshot of the Assist 2.00 web application interface. The interface is dark-themed and features a sidebar on the left with a menu icon, a search icon, and a "New chat" button. Below this, it shows "PROJECTS" with a "New project" button and a note: "No conversations yet. Drag a chat here to move it out of a project." The main content area displays the "gleeds" logo and a personalized greeting: "Good afternoon, James". A text input field contains a hint: "Hint: ask the model to think more for a deeper insight". Below the input field is a tip: "Tip: Press Cmd+/ (Mac) or Ctrl+/ (Windows) to focus. Shift+Enter adds a newline." At the bottom, there are four buttons for different project management tasks: "Writing & Comms", "Cost Management", "Project Management", and "Contracts & Notices". Below these buttons are four lines of text representing prompts for the AI assistant: "Draft a concise client email summarising today's meeting and next steps", "Rewrite this paragraph in a more formal, professional tone", "Analyse this draft for clarity and tone; suggest edits", and "Research two credible facts to strengthen the proposal".

Bridging The AI Skills Gap: The Gleeds Approach

For project management professionals at APM.

Surface Understanding

- Knows AI exists
- Can use ChatGPT
- Aware of basic use cases

Deep Operational Mastery Required

Instruction Engineering

- how to probe systems
- tool/data selection
- format optimization

System Behaviour

- recognizing failure modes
- understanding performance limits
- intent vs pandering

Memory & Context

- context window management
- memory function
- degradation patterns

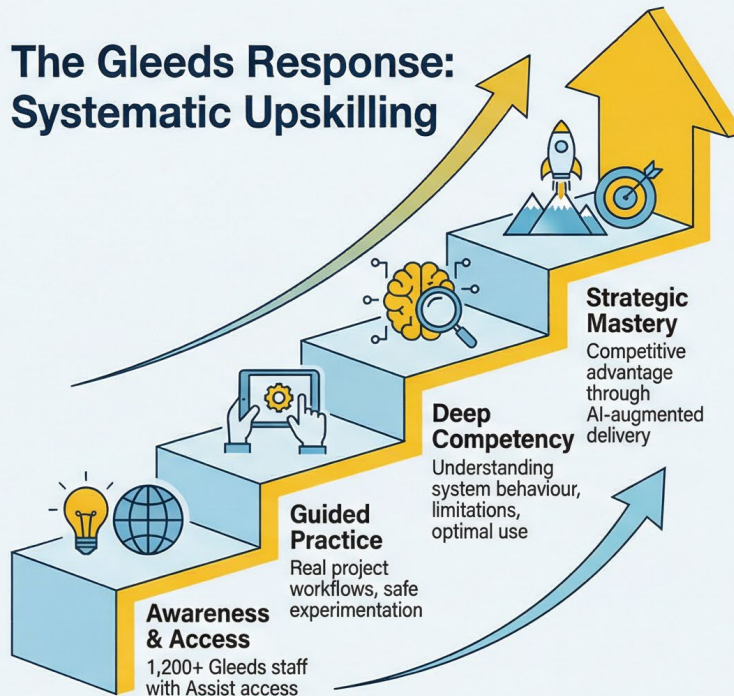

Risk Management

- hallucination triggers
- bias identification
- agent supervision
- safety protocols

Chain of Thought

- verification methods
- reasoning assessment
- transparency evaluation

The Gleeds Response: Systematic Upskilling

gleeds

Why We're Investing Now

- AI capabilities evolve faster than traditional training cycles
- Early adopters build compounding advantage
- Organizational flexibility beats late adoption
- Project delivery demands operational AI mastery, not surface awareness

The Challenge:

Most organizations underestimate the depth of AI competency required.

The Gleeds Solution:

Systematic upskilling at scale, embedding AI literacy across project delivery teams.

8 TARGET BEHAVIOURS: AI-MATURE PRACTICE

The difference between superficial tool usage and genuine capability integration

AUDITABILITY

Can users check AI work against professional standards (RICS, NRM, APM)?

SAFETY

Are users redacting sensitive data and avoiding bias?

VERIFICATION

Do users know when and where human judgement is required?

ADAPTABILITY

Can users detect when prompt chains are too complex and manage context effectively?

COLLABORATION

Are users sharing techniques, branching conversations, and working in groups?

REUSABILITY

Can someone else run the prompt in 10 minutes with minimal context?

DECISION-SUPPORT

Do outputs include options, trade-offs, criteria, and recommended next steps?

REAL-WORLD APPLICATION

Will this be used on a live project within 2-4 weeks?

Assist AI Case Study: Education Sector

Rapid Scenario Testing for Complex School Scheme

PROJECT CONTEXT

- New Primary School
- UK Regions
- Two-stage contract strategy

**140+ HOURS
SAVED**

In just a few days

THE CHALLENGE

- Regional cost benchmarks needed
- Programme implications unclear
- Design impact analysis required
- Multiple scenarios to evaluate

THE IMPACT

Time Compression

140 hours of manual analysis eliminated

Better Decisions

Quantified impacts vs generic statements

Client Value

Grounded advice in days not weeks

Material Impact on Service Delivery

The RICS AI Standard at a Glance

Published in **September 2025** and effective from **9 March 2026**, the RICS professional standard "Responsible use of artificial intelligence in surveying practice" establishes **mandatory requirements** for RICS members and regulated firms globally. The standard takes a balanced approach—supportive of AI's transformative potential whilst guarding against complacency about its risks.

01

Baseline Knowledge

Understanding AI systems, their limitations, failure modes, and inherent risks

02

Practice Management

Governance frameworks for data, systems, and risk management

03

Using AI

Procurement, reliance on outputs, client communication, and **explainability**

04

Development of AI

Requirements for organisations building AI systems from inception

Key Concept: The standard applies when AI outputs have a **material impact on service delivery**—meaning outputs capable of influencing how professional work is rendered meaningful.

The Robots are Coming

A humanoid robot with a dark, sleek, metallic finish stands in a factory environment. The robot has a helmet-like head with a visor and is positioned in front of a large, complex industrial machine with yellow and grey components. The background shows a factory floor with various equipment and lighting.

BMW DEPLOYMENT UPDATE

Humanoid Robots in Construction

Humanoid Capabilities

Humanoid robots are uniquely suited for construction environments as they can navigate the same spaces and use the same tools designed for humans. Their **advanced mobility**, **dexterous manipulation**, and **AI-powered adaptation** make them versatile across multiple construction tasks.

Leading Humanoid Robots

Several companies are developing humanoid robots with construction applications. These robots represent the cutting edge of what's possible in physical AI for the built environment.

Atlas

Boston Dynamics

Demonstrated agility on mock construction sites - climbing scaffolds and manipulating objects in a construction-like environment.

Source: Boston Dynamics (2023)

Optimus

Tesla

Designed for "dangerous, repetitive, boring tasks" and is slated for initial production by 2026, with applications for construction sites.

AI at Work: Four Key Messages

Transforming Construction Through Data and Intelligence

This is a culture change, not just a technology rollout.
The future of Construction is intelligent, data-driven, and human-centred.

AI as Thought Partner

Augments human expertise.
Automates routine tasks.
Frees professionals for strategic thinking.

Institution Aligned Implementation

Professional standards matter.
Deploy AI with transparency,
governance, and ethical responsibility.

AI
Core

Experimentation at Pace

Start with pilots. Learn from results. Scale what works.
Competitive advantage belongs to those who move fast.

Measurable Value

Multi-billion pound opportunity.
Proven results:
savings, faster delivery,
time reductions.

The future of Construction is intelligent, data-driven, and human-centred.

Human-Centric Data (HCD) survey
